types. But the “new” CoffeeScript has components that are different than CoffeeScript and that  
are not officially supported by TypeScript. If that’s important to you, consider using one of the  
following workarounds: How can I know if it’s TypeScript or not? If someone tells you it’s  
TypeScript, they’re wrong. It is not TypeScript. TypeScript is a superset of JavaScript with  
optional types, which is also a superset of JavaScript. TypeScript is not a superset of CoffeeScript.  
TypeScript is a superset of CoffeeScript with optional types. If you want to know if your  
JavaScript code is TypeScript, use my little type checker:In clinical practice, many doctors and  
patients are unaware that many of the skin diseases that they observe are treatable. The purpose of  
this study is to determine how many primary care doctors already treat skin diseases under their  
clinical practices and determine the reasons for their failure to treat and/or be aware of each of  
the conditions included in this study. A two-part study will be performed: Phase I. Will survey all  
primary care physicians in the Halifax Regional Municipality, Nova Scotia. Phase II. Will  
determine the prevalence of the types of skin disease that the primary care physicians in Phase I  
treat and/or are aware of. In Phase I, all physicians in the HRM will be asked to complete an email-  
based survey about how often they treat skin disease; the skin conditions they treat the most and  
least often; if they are aware of any resources they would like to be reminded of and how they  
learn about skin conditions. In Phase II, the primary care physicians who responded to the Phase I  
survey will be sampled in a non-probabilistic manner. The sample will be stratified for the number  
of years practicing and for whether or not they belong to a practice group. The stratification of the  
sample will ensure an even distribution of respondents for any conclusions that might be drawn  
from the survey. The respondents will be asked about the

Q: Calculate the pressure of a fluid at the bottom of the container I have a container, the bottom of which is fixed to the floor. A fluid is poured into the container, then a time  $T$  is allowed for the fluid to drain. The volume of the liquid is  $V = 11 \text{ cm}^3$ . The surface area of the container's bottom is  $A = 12 \text{ cm}^2$ . Find the maximum pressure and the speed at which the fluid is drained when  $T = 0.5 \text{ s}$ . So I know that to compute the maximum pressure I would have to find the maximum internal pressure and find the normal force acting on the bottom of the container but there isn't much info on how to approach the problem. Since I'm really only familiar with solving problems involving pressure, I'm not really sure how to go about this one.

A: You need the equivalent weight of the water to find the maximum pressure.  $P_{\text{top}} = \frac{f}{A} = \frac{50 \text{ g}}{12 \text{ cm}^2} = 3.8 \text{ Pa}$  You'd then find the flow rate as:  $Q = \frac{V}{T} = \frac{11 \text{ cm}^3}{0.5 \text{ s}} \approx 2.66 \text{ cm}^3/\text{s}$  And speed as:  $v = \frac{Q}{A} = \frac{2.66 \text{ cm}^3/\text{s}}{12 \text{ cm}^2} = 3 \text{ cm/s}$
