Please follow me on Facebook: This is an absolute must for all radio-savvy DXers and/or G3/G4 HF-listeners. For the more experienced in the so-called "old-school" technology, who can also operate the gadget, this gadget is ideal, well for nothing else than DMs. For the DXer, learning the tool is a matter of some time, especially due to the very complex PC interface. What is the thing that differentiates this gadget from the others for the amateur radio-user? The easy piecing-together of modules (from the latest version of the software, of course) and the external USB port of the computer for maximum quality, such as by RCA, which is clearly also in-built. The ergonomics of the device itself is something that is at first glance quite astonishing. The broad use of different style, as well as the use of plastic, has made this gadget become a serious tool, one that can be used in all different situations, from live-stand to field, and can be used anywhere and everywhere. Is there anything that doesn't work with this gadget? In the software, of course, because this is a radio gadget that has not been made from scratch, but as you will see. It is no wonder, that some connections are not the easiest to make. In the software itself, it is the easy access to the memory that you can. Overall, this is a nice radio gadget for the technically-driven DXer or G3/G4 HF-listener. The radio has an ability to travel the great distances in a modern world, although it is not 09e8f5149f

This article describes the project. DEEP EARTH PROGRAMME PROJECT SITE To assist those who wish to contact stations in 'Deep' locations such as the Madagascar hotspot, and other areas of interest to radio amateurs, we have made a working website which includes a database of radio stations, recent information on their operation, and a forum for submitting news and information. MISSIONS The Deep Earth Programme is made possible by funding from the Science and Technology Facilities Council (STFC). DEEP EARTH MAGAZINE Every month we plan to publish a Deep Earth magazine which will include news and information concerning DX stations in 'Deep' locations. We also intend to update our listing of Dx stations regularly. We would be interested to hear from DXers, particularly DX stations in the Madagascar hotspot, who may wish to share their experiences. DEEP ENGLAND The BBC and the UK Amateur Radio Association (UKARA) have been broadcasting The UK's Deepest DX Stations Project from BBC Radio 4 each week for the last few years. Listen to what has happened since the first programme in September 2005. The programmes are accessible from the link to the show's page on the web.
