Category: English idiomsI received a few PMs recently asking for help. Some were showing their site as uploading slow and others were worried they'd run out of space (which is why I still have over 50 GB still available but this is a small percentage on my total space.) When you visit this URL it would appear that the gallery is frozen and I'm getting a "page not found." However, my test site works fine when you navigate directly to that URL. I have tried this with both of my old servers and the new one. However, I did post the issue on Google's webmaster forums and a few members have suggested that my "malware" could be the culprit. I'm not sure what this is or what to do. I keep getting the "attacker blocked this site, please contact your web host." Sorry to bother but you can also use our web building service that will give you as much space you need. You can find that in our homepage. Blogger website programming These are the prime reasons why your Blogger blogs are not working. Some of the Blogger website files are corrupted and cannot be repaired. There are two options if you find that your Blogger website has been damaged o Update blogger.com in a timely manner. o Find a Professional Web Hosting Solution. If I had more time, I would have started the update myself but I'm not sure how long it'll take to update my server.Q: eclipse error and how to fix it here's the error i'm getting after updating my eclipse. MVC stands for Model View Controller. It is a pattern for writing software applications. Each MVC app is broken down into these three parts. Model - This is where all of your data is stored. This could be a database, file system, web service, or anything really. It's also a class library that holds all the logic and processing logic. View - This is where all of your user interface is. This is where you display data to the user and it is where all of the logic is. Controller - This is where you write logic to create and edit your models, view models, and to act as a dispatcher to change the view based on the user's input. You can then expand upon this pattern and apply it to various other design patterns. MVC can be used for designing the back end of a web app, a desktop app, or a command-line application. But, for the sake of this post, we'll focus on web apps. Why use MVC? MVC frameworks are incredibly useful. A simple reason for using MVC is to keep your code organized. You can find your work as you're building it, but no one else can. Plus you get some really big benefits like unobtrusive JavaScript. If you find yourself repeating the same code over and over again, or if you're building something that
